Office Action Summary	Application No. 10/758,632	Applicant(s) HOFMANN, ALBERT	
	Examiner William C. Doerrler	Art Unit 3744	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 and 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stautner (6,192,690) in view of Longworth (4,484,458).

Stautner discloses applicant's basic inventive concept, a pulse tube cooler thermally linked to a ring 8 in the neck of a container for containing liquefied gases as well a low heat conductivity heat shields (see column 2 lines 48-67), substantially as claimed with the exception of an annular ring to thermally connect the neck and the pulse tube.

Longworth shows this feature to be old in the cryocooling art (see heat exchanger 18). It would have been obvious to one of ordinary skill in the art at the time of applicant's invention from the teaching of Longworth to modify the pulse tube cooler of Stautner by using an annular heat exchanger to ensure heat transfer between the cryocooler and a heat exchanger in the neck of a cryogen container while permitting thermal expansion.

Allowable Subject Matter

Claims 2 and 4-11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Xu shows cryocooler with expansion relieving means which recondenses evaporating cryogen. Ross et al show a cryocooler with thermal expansion relieving means.
